

Sustainability Policy

We strive to integrate environmental, social and economic factors into all business activities and to make an ongoing, proactive contribution towards sustainable development

We are committed to:

- The prevention of pollution
- The efficient use of energy, fuel, water and materials
- The re-use and recycling of materials wherever possible
- Developing and monitoring targets to help us to manage the impact of our activities on the natural and social environment
- Compliance with all relevant environmental legislation
- The training of staff to enhance awareness of key environmental issues
- Valuing the contribution that every employee can make in improving our resource efficiency
- Working in partnership with our suppliers and customers to ensure sustainable supply chains
- Influencing markets by selecting products which have the least negative environmental impact
